Bioinformation

Database links	GeneID: 24626 Rat GeneID: 5142 Human Swiss-port # P14646 Rat Swiss-port # Q07343 Human
Gene Symbol	PDE4B
Gene Full Name	phosphodiesterase 4B, cAMP-specific
Background	This gene is a member of the type IV, cyclic AMP (cAMP)-specific, cyclic nucleotide phosphodiesterase (PDE) family. The encoded protein regulates the cellular concentrations of cyclic nucleotides and thereby play a role in signal transduction. Altered activity of this protein has been associated with schizophrenia and bipolar affective disorder. Alternative splicing and the use of alternative promoters results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jul 2014]
Function	Hydrolyzes the second messenger cAMP, which is a key regulator of many important physiological processes. May be involved in mediating central nervous system effects of therapeutic agents ranging from antidepressants to antiasthmatic and anti-inflammatory agents. [UniProt]
Calculated Mw	83 kDa
