

Summary

# ARG21153 anti-CD3 epsilon antibody [CT-3] (PE)

Package: 50 μg Store at: 4°C

Product DescriptionPE-conjugated Mouse Monoclonal antibody [CT-3] recognizes CD3 epsilonTested ReactivityChkTested ApplicationFACS, IHC-Fr, IHC-PSpecificityChicken CD3 epsilon. The clone CT-3 recognizes a complex of at least three polypeptides of Mr 20, 19, and 17 kDa (two of which are N-glycosylated) on chicken T cells. The antibody also coprecipitates a polypeptide of 90 kDa from digitonin solubilized T cell lysates, which can be reduced to two polypeptides of Mr 50 and 40 kDa.HostMouseClonalityMonoclonalCloneCT-3IsotypeIgG1, kappaTarget NameCD3 epsilonSpeciesChicken thymocytes and Ig- blood mononuclear cellsConjugationPEAlternate NamesCD3E; CD3 Epsilon Subunit Of T-Cell Receptor Complex; T-Cell Surface Glycoprotein CD3 Epsilon Chain; CD3e Antigen, Epsilon Polypeptide (TT3 Complex); T-Cell Antigen Receptor Complex, Epsilon Subunit Of T3; CD3e Molecule; CD3-Epsilon; CD3EPSILON; CD3EPSILON	••••••	
Tested ApplicationFACS, IHC-Fr, IHC-PSpecificityChicken CD3 epsilon. The clone CT-3 recognizes a complex of at least three polypeptides of Mr 20, 19, and 17 KDa (two of which are N-glycosylated) on chicken T cells. The antibody also coprecipitates a polypeptide of 90 kDa from digitonin solubilized T cell lysates, which can be reduced to two polypeptides of Mr 50 and 40 kDa.HostMouseClonalityMonoclonalCloneCT-3IsotypeIgG1, kappaTarget NameCD3 epsilonSpeciesChicken thymocytes and Ig- blood mononuclear cellsImmunogenPEAlternate NamesCD3E; CD3 Epsilon Subunit Of T-Cell Receptor Complex; T-Cell Surface Antigen T3/Leu-4 Epsilon Chair; CD3 epsilon CD3-TCR Complex; CD3-Epsilon; CD3-	Product Description	PE-conjugated Mouse Monoclonal antibody [CT-3] recognizes CD3 epsilon

# **Application Instructions**

Application table	Application	Dilution
	FACS	< 0.5 µg/10^6 cells
	IHC-Fr	Assay-dependent
	IHC-P	Assay-dependent
Application Note	* The dilutions indicate recomm should be determined by the sci	nended starting dilutions and the optimal dilutions or concentrations itentist.

## Properties

Form	Liquid
Buffer	PBS, 0.1% Sodium azide and Sucrose.
Preservative	0.1% Sodium azide
Stabilizer	Sucrose

Concentration	0.1 mg/ml
Storage instruction	Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.
Note	For laboratory research only, not for drug, diagnostic or other use.

### Bioinformation

Gene Symbol	CD3E
Gene Full Name	CD3 Epsilon Subunit Of T-Cell Receptor Complex
Background	The protein encoded by this gene is the CD3-epsilon polypeptide, which together with CD3-gamma, -delta and -zeta, and the T-cell receptor alpha/beta and gamma/delta heterodimers, forms the T-cell receptor-CD3 complex. This complex plays an important role in coupling antigen recognition to several intracellular signal-transduction pathways. The genes encoding the epsilon, gamma and delta polypeptides are located in the same cluster on chromosome 11. The epsilon polypeptide plays an essential role in T-cell development. Defects in this gene cause immunodeficiency. This gene has also been linked to a susceptibility to type I diabetes in women.
Function	Part of the TCR-CD3 complex present on T-lymphocyte cell surface that plays an essential role in adaptive immune response. When antigen presenting cells (APCs) activate T-cell receptor (TCR), TCR-mediated signals are transmitted across the cell membrane by the CD3 chains CD3D, CD3E, CD3G and CD3Z. All CD3 chains contain immunoreceptor tyrosine-based activation motifs (ITAMs) in their cytoplasmic domain. Upon TCR engagement, these motifs become phosphorylated by Src family protein tyrosine kinases LCK and FYN, resulting in the activation of downstream signaling pathway.
