# ARG23041 anti-CD41 antibody [PM6/248] (PE)

Package: 50 tests Store at: 4°C

## **Summary**

**Target Name** 

PE-conjugated Mouse Monoclonal antibody [PM6/248] recognizes CD41 **Product Description** 

> Mouse anti Human CD41 antibody, clone PM6/248 recognizes the human CD41 cell surface antigen, a 140kD glycoprotein expressed by platelets and megakaryocytes. CD41 is also known as platelet glycoprotein IIb, and functions as a receptor for fibrinogen, fibronectin and vWF.It has not been established if clone PM6/248 recognizes free CD41 or CD41 only when complexed with CD61. However, antibody binding is reduced in the presence of EDTA suggesting that the epitope recognized is

dependent upon an intact CD41/61 complex.

**Tested Reactivity** Hu, Bb

FACS **Tested Application** 

Host Mouse

Clonality Monoclonal

Clone PM6/248

Isotype lgG1

**Species** Human

Immunogen Human platelet plasma membranes.

CD41

Conjugation PΕ

GTA; GT; GPalpha IIb; PPP1R93; CD41; BDPLT12; BDPLT16; GP2B; Integrin alpha-IIb; GPIIb; Platelet **Alternate Names** 

membrane glycoprotein IIb; HPA3; CD antigen CD41; CD41B

#### **Application Instructions**

Application table Application Dilution FACS Assay-dependent

FACS: Use 10  $\mu$ l of the suggested working dilution to label 10^6 cells or 100  $\mu$ l whole blood **Application Note** 

\* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations

should be determined by the scientist.

#### **Properties**

Form Liquid

Purification Purification with Protein A.

Buffer PBS, 0.09% Sodium azide, 1% BSA and 5% Sucrose

Preservative 0.09% Sodium azide

Stabilizer 1% BSA and 5% Sucrose

Storage instruction Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid

repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be

arigo, nuts about antibodies www.arigobio.com 1/2 Note

For laboratory research only, not for drug, diagnostic or other use.

### **Bioinformation**

Gene Symbol ITGA2B

Gene Full Name integrin, alpha 2b (platelet glycoprotein IIb of IIb/IIIa complex, antigen CD41)

Background ITGA2B encodes integrin alpha chain 2b. Integrins are heterodimeric integral membrane proteins

composed of an alpha chain and a beta chain. Alpha chain 2b undergoes post-translational cleavage to yield disulfide-linked light and heavy chains that join with beta 3 to form a fibronectin receptor expressed in platelets that plays a crucial role in coagulation. Mutations that interfere with this role result in thrombasthenia. In addition to adhesion, integrins are known to participate in cell-surface

mediated signalling. [provided by RefSeq, Jul 2008]

Function Integrin alpha-IIb/beta-3 is a receptor for fibronectin, fibrinogen, plasminogen, prothrombin,

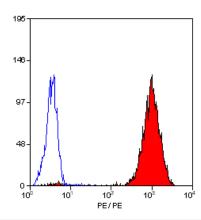

thrombospondin and vitronectin. It recognizes the sequence R-G-D in a wide array of ligands. It recognizes the sequence H-H-L-G-G-G-A-K-Q-A-G-D-V in fibrinogen gamma chain. Following activation integrin alpha-IIb/beta-3 brings about platelet/platelet interaction through binding of soluble

fibrinogen. This step leads to rapid platelet aggregation which physically plugs ruptured endothelial cell

surface. [UniProt]

Calculated Mw 113 kDa
