Summary

Product Description	Cells recognize and respond to their extracellular environment through transmembrane receptors such as integrins, which physically connect the extracellular matrix to the cytoskeleton. Integrins provide the basis for the assembly of intracellular signaling platforms that link to the cytoskeleton and influence nearly every aspect of cell physiology. The integrin beta 3 protein mediates platelet adhesion to immobilized fibrinogen. Adhesion to fibrinogen induced rapid phosphorylation of Integrin beta 3 on Tyr773 and Tyr785 residues, which was reduced by Nitrogen Oxide in a cGMP independent manner. Oberprieler et al. 2007. FEBS Lett 581(7) Legate and Fassler. J Cell Sci 122: 187-98
