ARG40434 anti-MTAP antibody

Package: 100 μl Store at: -20°C

Summary

Product Description Rabbit Polyclonal antibody recognizes MTAP

Tested Reactivity Hu, Ms, Rat

Tested Application ICC/IF, IHC-P, WB

Host Rabbit

Clonality Polyclonal

Isotype IgG

Target Name MTAP

Species Human

Immunogen Recombinant fusion protein corresponding to aa. 1-283 of Human MTAP (NP_002442.2).

Conjugation Un-conjugated

Alternate Names 5'-methylthioadenosine phosphorylase; MTA phosphorylase; MSAP; LGMBF; EC 2.4.2.28; HEL-249;

DMSFH; BDMF; S-methyl-5'-thioadenosine phosphorylase; MTAPase; MTAP; DMSMFH; c86fus

Application Instructions

Application table	Application	Dilution
	ICC/IF	1:50 - 1:200
	IHC-P	1:50 - 1:200
	WB	1:500 - 1:2000
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Positive Control	293T	
Observed Size	31 kDa	

Properties

Form Liquid

Purification Affinity purified.

Buffer PBS (pH 7.3), 0.02% Sodium azide and 50% Glycerol.

Preservative 0.02% Sodium azide

Stabilizer 50% Glycerol

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

Bioinformation

Gene Symbol MTAP

Gene Full Name methylthioadenosine phosphorylase

Background This gene encodes an enzyme that plays a major role in polyamine metabolism and is important for the

salvage of both adenine and methionine. The encoded enzyme is deficient in many cancers because this gene and the tumor suppressor p16 gene are co-deleted. Multiple alternatively spliced transcript variants have been described for this gene, but their full-length natures remain unknown. [provided by

RefSeq, Jul 2008]

Function Catalyzes the reversible phosphorylation of S-methyl-5'-thioadenosine (MTA) to adenine and

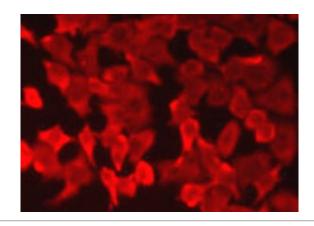

5-methylthioribose-1-phosphate. Involved in the breakdown of MTA, a major by-product of polyamine biosynthesis. Responsible for the first step in the methionine salvage pathway after MTA has been generated from S-adenosylmethionine. Has broad substrate specificity with 6-aminopurine nucleosides

as preferred substrates. [UniProt]

Calculated Mw 31 kDa

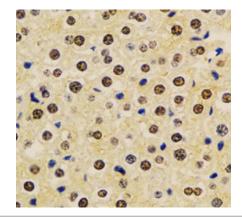

Cellular Localization Cytoplasm. Nucleus. [UniProt]
