ARG55043 anti-CD19 antibody [4G7] (APC)

Package: 100 tests Store at: -20°C

Summary

Product Description APC-conjugated Mouse Monoclonal antibody [4G7] recognizes CD19

Tested Reactivity Hu
Tested Application FACS

Specificity This antibody detects CD19, a 95 kDa type I transmembrane glycoprotein of immunoglobulin

superfamily, expressed on B lymphocytes and follicular dendritic cells; it is lost on plasma cells.

Host Mouse

Clonality Monoclonal

Clone 4G7
Isotype IgG1
Target Name CD19
Species Human

Immunogen Human CCL (chronic lymphocytic leukemia) cells

Conjugation APC

Alternate Names Differentiation antigen CD19; T-cell surface antigen Leu-12; B-lymphocyte antigen CD19; B-lymphocyte

surface antigen B4; B4; CD antigen CD19; CVID3

Application Instructions

Application table	Application	Dilution
	FACS	10 μl / 10^6 cells
Application Note	* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	

Properties

Form Liquid

Purification Affinity purification with immunogen.

Buffer PBS, 15 mM Sodium azide and 0.2% (w/v) high-grade protease free BSA

Preservative 15 mM Sodium azide

Stabilizer 0.2% (w/v) high-grade protease free BSA

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Keep the antibody in the dark and keep protected from prolonged exposure to light. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use.

Note For laboratory research only, not for drug, diagnostic or other use.

Bioinformation

Database links <u>GeneID: 930 Human</u>

Swiss-port # P15391 Human

Gene Symbol CD19

Gene Full Name CD19 molecule

Background CD19: Lymphocytes proliferate and differentiate in response to various concentrations of different

antigens. The ability of the B cell to respond in a specific, yet sensitive manner to the various antigens is achieved with the use of low-affinity antigen receptors. This gene encodes a cell surface molecule which assembles with the antigen receptor of B lymphocytes in order to decrease the threshold for

antigen receptor-dependent stimulation. [provided by RefSeq, Jul 2008]

Function CD19 functions as coreceptor for the B-cell antigen receptor complex (BCR) on B-lymphocytes.

Decreases the threshold for activation of downstream signaling pathways and for triggering B-cell responses to antigens (PubMed:2463100, PubMed:1373518, PubMed:16672701). Activates signaling pathways that lead to the activation of phosphatidylinositol 3-kinase and the mobilization of

intracellular Ca(2+) stores (PubMed:9382888, PubMed:9317126, PubMed:12387743,

PubMed:16672701). Is not required for early steps during B cell differentiation in the blood marrow (PubMed:9317126). Required for normal differentiation of B-1 cells. Required for normal B cell

differentiation and proliferation in response to antigen challenges (PubMed:2463100,

PubMed:1373518). Required for normal levels of serum immunoglobulins, and for production of high-

affinity antibodies in response to antigen challenge (PubMed:9317126, PubMed:12387743,

PubMed:16672701). [UniProt]
