Bioinformation

Database links	GeneID: 5376 Human Swiss-port # Q01453 Human
Gene Symbol	PMP22
Gene Full Name	peripheral myelin protein 22
Background	<p>This gene encodes an integral membrane protein that is a major component of myelin in the peripheral nervous system. Studies suggest two alternately used promoters drive tissue-specific expression. Various mutations of this gene are causes of Charcot-Marie-Tooth disease Type IA, Dejerine-Sottas syndrome, and hereditary neuropathy with liability to pressure palsies. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2013]</p>
Function	<p>Might be involved in growth regulation, and in myelinization in the peripheral nervous system. [UniProt]</p>
Research Area	Controls and Markers antibody; Neuroscience antibody
Calculated Mw	18 kDa
