Background	This gene encodes a member of the doublecortin family. The protein encoded by this gene contains two doublecortin domains. The doublecortin domain has been demonstrated to bind tubulin and enhance microtubule polymerization. Mutations in this gene have been associated with Reading Disability (RD), also referred to as developmental dyslexia. Alternatively spliced transcript variants encoding the same protein have been found for this gene.[provided by RefSeq, Sep 2010]
Research Area	Neuroscience antibody; Signaling Transduction antibody
Calculated Mw	53 kDa
