ARG64153 anti-Actin like 7B antibody

Package: 100 μg Store at: -20°C

Summary

Product Description Goat Polyclonal antibody recognizes Actin like 7B

Tested Reactivity Rat
Predict Reactivity Ms
Tested Application WB

Specificity This antibody is not expected to cross-react with Actin-like 7A.

Host Goat

Clonality Polyclonal

Isotype IgG

Target Name Actin like 7B

Species Mouse

Immunogen C-DELHVDYELPDGK

Conjugation Un-conjugated

Alternate Names Actin-like protein 7B; Actin-like-7-beta; Tact1

Application Instructions

Application table	Application	Dilution
	WB	0.5 - 1.5 μg/ml

Application Note WB: Recommend incubate at RT for 1h.

* The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations

should be determined by the scientist.

Properties

Form Liquid

Purification Purified from goat serum by antigen affinity chromatography.

Buffer Tris saline (pH 7.3), 0.02% Sodium azide and 0.5% BSA.

Preservative 0.02% Sodium azide

Stabilizer 0.5% BSA

Concentration 0.5 mg/ml

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C or below. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed

before use.

Database links <u>GeneID: 313183 Rat</u>

Swiss-port # Q4QR76 Rat

Gene Symbol Actl7b

Gene Full Name actin-like 7b

Background The protein encoded by this gene is a member of a family of actin-related proteins (ARPs) which share

significant amino acid sequence identity to conventional actins. Both actins and ARPs have an actin fold, which is an ATP-binding cleft, as a common feature. The ARPs are involved in diverse cellular processes, including vesicular transport, spindle orientation, nuclear migration and chromatin remodeling. This gene (ACTL7B), and related gene, ACTL7A, are intronless, and are located approximately 4 kb apart in a head-to-head orientation within the familial dysautonomia candidate region on 9q31. Based on mutational analysis of the ACTL7B gene in patients with this disorder, it was concluded that it is unlikely to be involved in the pathogenesis of dysautonomia. Unlike ACTL7A, the ACTL7B gene is expressed predominantly in the testis, however, its exact function is not known. [provided by RefSeq, Jul 2008]

Research Area Signaling Transduction antibody

Calculated Mw 45 kDa
