

Summary

## ARG65375 anti-CD140a / PDGFRA antibody [16A1] (FITC)

Package: 100 μg Store at: 4°C

| · · · · · · · · · · · · · · · · · · · |   |
|---------------------------------------|---|
| Product Description                   | FITC-conjugated Mouse Monoclonal antibody [16A1] recognizes CD140a / PDGF-RA  |
| Tested Reactivity                     | Hu  |
| Tested Application                    | FACS  |
| Specificity                           | The mouse monoclonal antibody 16A1 recognizes CD140a / PDGFRA, the 170 kDa alpha chain of<br>plateletderived growth factor receptor, which is widely expressed on a variety of mesenchymalderived<br>cells and plays proproliferative or antiproliferative roles in various tumours.<br>HLDA VI.; WS Code E022  |
| Host                                  | Mouse   |
| Clonality                             | Monoclonal  |
| Clone                                 | 16A1  |
| Isotype                               | lgG1  |
| Target Name                           | CD140a / PDGFRA   |
| Immunogen                             | CD140a-transfected NIH 3T3 cells _x000D_  |
| Conjugation                           | FITC  |
| Alternate Names                       | Platelet-derived growth factor receptor alpha; PDGFR2; Alpha-type platelet-derived growth factor receptor; RHEPDGFRA; PDGFR-2; Platelet-derived growth factor receptor 2; CD140A; Platelet-derived growth factor alpha receptor; CD140 antigen-like family member A; CD antigen CD140a; PDGF-R-alpha; Alpha platelet-derived growth factor receptor; CD140a antigen; EC 2.7.10.1; PDGFR-alpha |

## **Application Instructions**

| Application table | Application  | Dilution          |
|-------------------|--|-------------------|
|                   | FACS   | 4 μl / 10^6 cells |
| Application Note  | * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist. |                   |

## Properties

| Form                | Liquid   |
|---------------------|--|
| Purification Note   | The purified antibody is conjugated with Fluorescein isothiocyanate (FITC) under optimum conditions.<br>The reagent is free of unconjugated FITC and adjusted for direct use. No reconstitution is necessary.                |
| Buffer              | PBS, 15 mM Sodium azide and 0.2% (w/v) high-grade protease free BSA  |
| Preservative        | 15 mM Sodium azide   |
| Stabilizer          | 0.2% (w/v) high-grade protease free BSA  |
| Storage instruction | Aliquot and store in the dark at 2-8°C. Keep protected from prolonged exposure to light. Avoid repeated freeze/thaw cycles. Suggest spin the vial prior to opening. The antibody solution should be gently mixed before use. |

## Bioinformation

| induced platelet aggregation. Binding of its cognate ligands - homodimeric PDGFA, homodimeric<br>PDGFB, heterodimers formed by PDGFA and PDGFB or homodimeric PDGFC -leads to the activation of<br>several signaling cascades; the response depends on the nature of the bound ligand and is modulated<br>by the formation of heterodimers between PDGFRA and PDGFRB. Phosphorylates PIK3R1, PLCG1, and<br>PTPN11. Activation of PLCG1 leads to the production of the cellular signaling molecules diacylglycerol<br>and inositol 1,4,5-trisphosphate, mobilization of cytosolic Ca(2+) and the activation of protein kinase C.<br>Phosphorylates PIK3R1, the regulatory subunit of phosphatidylinositol 3-kinase, and thereby mediates<br>activation of the AKT1 signaling pathway. Mediates activation of HRAS and of the MAP kinases<br>MAPK1/ERK2 and/or MAPK3/ERK1. Promotes activation of STAT family members STAT1, STAT3 and<br>STAT5A and/or STAT5B. Receptor signaling is down-regulated by protein phosphatases that<br>dephosphorylate the receptor and its down-stream effectors, and by rapid internalization of the<br>activated receptor. [UniProt]Research AreaCancer antibody; Cell Biology and Cellular Response antibody; Signaling Transduction antibody<br>123 kDaPTMN-glycosylated.<br>Ubiquitinated, leading to its degradation.  | Bioinformation |   |
