# ARG67079 anti-CD3D antibody [SQab30351]

Package: 100 μl Store at: -20°C

#### **Summary**

Product Description Recombinant Rabbit Monoclonal antibody [SQab30351] recognizes CD3D

Tested Reactivity Hu, Ms, Rat

Tested Application IHC-P, WB

Host Rabbit

Clonality Monoclonal
Clone SQab30351

IsotypeIgGTarget NameCD3DSpeciesHuman

ImmunogenSynthetic peptide of CD3D.

Conjugation Un-conjugated

Alternate Names CD3D; CD3 Delta Subunit Of T-Cell Receptor Complex; T-Cell Surface Glycoprotein CD3 Delta Chain;

CD3-DELTA; CD3DELTA; T3D; CD3d Antigen, Delta Polypeptide (TiT3 Complex); CD3d Molecule, Delta (CD3-TCR Complex); T-Cell Receptor T3 Delta Chain; CD3 Antigen, Delta Subunit; OKT3, Delta Chain;

CD3d Molecule; CD3d Antigen; CD3 Delta; IMD19

#### **Application Instructions**

Application table	Application	Dilution
	IHC-P	1:100-1:200
	WB	1:500 - 1:2000
Application Note	IHC-P: Antigen Retrieval: Heat mediation was performed in Tris/EDTA buffer (pH 9.0).  * The dilutions indicate recommended starting dilutions and the optimal dilutions or concentrations should be determined by the scientist.	
Observed Size	20 -25 kDa	

#### **Properties**

Form Liquid

Purification Purification with Protein A.

Buffer PBS, 0.01% Sodium azide, 40% Glycerol and 0.05% BSA.

Preservative 0.01% Sodium azide

Stabilizer 40% Glycerol and 0.05% BSA

Storage instruction For continuous use, store undiluted antibody at 2-8°C for up to a week. For long-term storage, aliquot

and store at -20°C. Storage in frost free freezers is not recommended. Avoid repeated freeze/thaw

For laboratory research only, not for drug, diagnostic or other use.

#### Bioinformation

Gene Symbol CD3D

Gene Full Name CD3 Delta Subunit Of T-Cell Receptor Complex

Background The protein encoded by this gene is part of the T-cell receptor/CD3 complex (TCR/CD3 complex) and is

involved in T-cell development and signal transduction. The encoded membrane protein represents the delta subunit of the CD3 complex, and along with four other CD3 subunits, binds either TCR alpha/beta or TCR gamma/delta to form the TCR/CD3 complex on the surface of T-cells. Defects in this gene are a cause of severe combined immunodeficiency autosomal recessive T-cell-negative/B-cell-positive/NK-cell-positive (SCIDBNK). Two transcript variants encoding different isoforms have been found for this gene. Other variants may also exist, but the full-length natures of their transcripts has yet to be

defined.

Function Part of the TCR-CD3 complex present on T-lymphocyte cell surface that plays an essential role in

adaptive immune response. When antigen presenting cells (APCs) activate T-cell receptor (TCR), TCR-mediated signals are transmitted across the cell membrane by the CD3 chains CD3D, CD3E, CD3G and CD3Z. All CD3 chains contain immunoreceptor tyrosine-based activation motifs (ITAMs) in their cytoplasmic domain. Upon TCR engagement, these motifs become phosphorylated by Src family protein

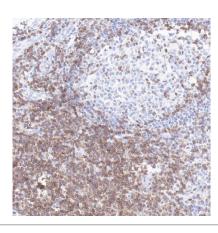

tyrosine kinases LCK and FYN, resulting in the activation of downstream signaling pathways.

Calculated Mw 19 kDa

PTM Disulfide bond, Glycoprotein, Phosphoprotein

Cellular Localization Cell membrane, Membrane
