### Bioinformation

Gene Symbol	TGFB3
Gene Full Name	transforming growth factor, beta 3
Background	This gene encodes a member of the TGF-beta family of proteins. The encoded protein is secreted and is involved in embryogenesis and cell differentiation. Defects in this gene are a cause of familial arrhythmogenic right ventricular dysplasia 1. [provided by RefSeq, Mar 2009]
Function	Involved in embryogenesis and cell differentiation. [UniProt]
