Bioinformation

Gene Symbol TIMP3

Gene Full Name TIMP metallopeptidase inhibitor 3

Background This gene belongs to the TIMP gene family. The proteins encoded by this gene family are inhibitors of

the matrix metalloproteinases, a group of peptidases involved in degradation of the extracellular matrix (ECM). Expression of this gene is induced in response to mitogenic stimulation and this netrin domain-containing protein is localized to the ECM. Mutations in this gene have been associated with the

autosomal dominant disorder Sorsby's fundus dystrophy. [provided by RefSeq, Jul 2008]

Function Complexes with metalloproteinases (such as collagenases) and irreversibly inactivates them by binding

to their catalytic zinc cofactor. May form part of a tissue-specific acute response to remodeling stimuli. Known to act on MMP-1, MMP-2, MMP-3, MMP-7, MMP-9, MMP-13, MMP-14 and MMP-15. [UniProt]
