Bioinformation

Gene Symbol CRELD1

Gene Full Name Cysteine Rich With EGF Like Domains 1

Background This gene encodes a member of a subfamily of epidermal growth factor-related proteins. The encoded

protein is characterized by a cysteine-rich with epidermal growth factor-like domain. This protein may function as a cell adhesion molecule. Mutations in this gene are the cause of atrioventricular septal

defect. Alternate splicing results in multiple transcript variants.

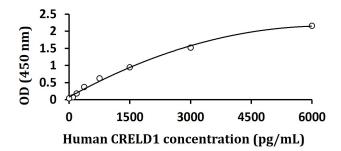

Function Promotes the localization of acetylcholine receptors (AChRs) to the plasma membrane (By similarity).
